

Viewpoint Field Management extends Vista to the job site. Increase efficiency while reducing risk by replacing paper based processes and the costs of disconnected field applications with real-time, bi-directional data flow between the construction accounting software in your back office, and the mobile devices that are on the job site or on-the-go.

Viewpoint Field Management is a responsively designed web app, and mobile app for iOS and Android phones and tablets that's offline capable. A direct channel to Vista, Viewpoint's construction accounting ERP, it lowers costs and risks by eliminating the double handling, duplication and manual entry of field data by back office personnel. Job site efficiency is increased and accuracy improved with a single screen in which labor, equipment, materials and production (as well as custom User Database fields) can be captured against validated Vista lookups e.g. job or phase. Its wide ranging capabilities also include purchase order and material requisitions, training, safety huddles, equipment and field ticketing for T&M billing.

Real-time data flow decreases time pressures on office staff so that payroll and other accounting processes are faster, more accurate and less manual. Visibility and control is improved by comparing daily job cost data to the project estimate, so that project managers can identify and arrest profit fade before it takes hold. While real-time over/under productivity reporting empowers field supervisors to make resource adjustments that keep projects on schedule.

BENEFITS

- Construction accounting integration
- Arrest profit fade
- Keep projects on schedule
- Eliminate double handling costs
- Save time with real-time data flow
- Mitigate risk from data entry error
- Eliminate paper loss/damage
- Increase job site efficiency
- Connect the office and the field
- Ease-of-use for fast adoption
- Offline capable iOS & Android apps

CAPABILITIES

LABOR, EQUIPMENT, MATERIALS & PRODUCTION CAPTURE

A unified screen in which labor, materials, equipment and production data can be captured. Eliminate the inefficiencies and potential for lost data that are common with paper processes, while reducing the costs and risks that are inherent with disconnected applications.

JOB COST & PRODUCTIVITY REPORTING

By comparing daily job cost data to the project estimate, project managers can identify and arrest profit fade before it takes hold. While real-time over/under productivity reporting empowers field supervisors to make resource adjustments that keep projects on schedule.

PURCHASE ORDERS & REQUISITIONS

Remove delays and layers of communication with the ability to create field POs or requisition materials from inventory from the job site. Vista settings control permissions and Vista lookups ensure POs and materials requisitions are coded to the right job.

MATERIAL RECEIPT

The best place and time to receive materials is upon delivery. Record units delivered, capture images of the receiving ticket and post the data directly to Vista.

TRAINING

Mitigate risk by gaining visibility over the training history, skills and certification of job site personnel. Easily track and manage training courses with an intuitive dashboard.

SAFETY HUDDLES

Keep project teams aligned and accountable by managing the huddle schedule and documenting talking points and action items.

EQUIPMENT

As projects multiply, keeping track of equipment and assets is key to maintaining productivity and preventing losses in the field. Extend your Vista EM data to the field. View equipment locations, information and meters. Transfer, update mileage and manage mechanic Work Orders.

FIELD TICKETING FOR T&M BILLING

Construction accounting integrated field ticketing. Maximize revenue and reduce costs by streamlining the capture of T&M in the field, eliminate data double handling and automating the consolidation and production of field tickets.
